SOUL TO SOLE AUDIO

BAM20 & BAM40 Hi-Fi Racks

Introducing a new range of handcrafted bamboo plywood hi-fi racks, combining the natural beauty and strength of bamboo with 50mm diameter stainless steel legs. Designed and hand-built by Stephen Seque of Soul to Sole Audio in Hawkes Bay, New Zealand.

Modular by Design

The **BAM** rack system is built around a simple, flexible principle. The 590mm x 470mm shelves stack on top of each other from the base shelf up. You start off with a base shelf, then as many middle shelves as you require and then finish off with a top shelf. If your system expands you just add more middle shelves. The **BAM20** uses 20mm bamboo plywood shelves, while the **BAM40** uses a more substantial 40mm bamboo plywood for a heavier, more rigid platform.

Craftsmanship & Finish

Every shelf is hand-sanded to a silky-smooth finish and sealed with a durable clear coat, lending each rack a rich, distinctive appearance that complements any listening room.

Engineered for Audio Performance

The legs slip into circular grooves machined above and below each leg. The legs are bolted into the shelves from above and this allows the legs to seat precisely into the shelf below. Each upper shelf groove is fitted with a silicone O-ring to help suppress vibration transmission between shelves. The 50mm diameter brushed stainless steel legs are sand-filled to increase mass and provide structural damping, helping reduce unwanted resonances. Custom “6-leaved” high-tensile threaded inserts, fitted inside each leg, ensures a rock-solid connection to the shelf using countersunk stainless steel bolts.

Leg Spacing Options

Six standard leg spacing/lengths are available: 70mm, 120mm, 170mm, 220mm, 270mm, 320mm. Custom spacings are available on request to accommodate any component height. The component space between the front legs is 470mm.

Flat-Pack Shipping Nationwide.

Each shelf, and its matching legs, are packed and shipped in flat-pack boxes. Each box holds 1x **BAM40** shelf with legs, or 2 x **BAM20** shelves with legs. This is the most economical way to courier or transport them on a small pallet

The **BAM20** and **BAM40** come with detailed instructions and are very easily assembled using the supplied Allen Key.
