

# TUI RECORD BROWSER

FROM SOUL TO SOLE AUDIO

**Introducing a record storage option that is as attractive to look at as it is useful.**

Designed and manufactured by Soul to Sole Audio in Hawkes Bay, New Zealand. The TUI (pronounced '2-E') stores up to 100 LP's. That would be quite tight for browsing, so 80 albums for good 'flickability'.

Cleverly designed with 'tongue and groove' tabs and 'cam' locking systems. It can be transported flat-packed worldwide and easily assembled in about 10 minutes.

The TUI is slim, elegant looking and stable. The unit is manufactured from 20mm bamboo ply and the bamboo edge looks great compared to 'normal' ply. Bamboo is a wonderful, renewable alternative to slow growing hardwoods. It is extremely stable and a much 'greener' material. All surfaces are hand-sanded and oiled to a silky golden finish.

The TUI is narrow enough to fit into a small space and also designed to be expandable with single units bolting together to make as long a unit as you need. Each TUI will come with connecting bolts and tools for expansion if desired.

The TUI has been conceived and built as a very attractive record storage solution that will fit into any living room situation.

'Now Playing' slot in rear panel.
